Max 340 000

Min 95%

# Four Tasks in the Project

---

- Task A
  - Create graphs over nine different relationships.
  - Lisam Quiz to test conceptual shape.
- Task B
  - Run 10 simulations (we run the model) with the target to reach:  
Inventory cost: 340 000 kr  
Service level: 95 %  
Total Cost: 680 000 kr
  - Test all different planning methods
  - Lisam Quiz before simulations (at least one in each group needs to pass)
- Task C
  - Carry out a setup time reduction and study the effects.
  - Run 3 simulations (we run the model) to study the effects.
- Task D
  - Formulate system specific guidelines and rules that apply to the design parameters.
  - Run 3 simulations (we run the model) to “optimize” the system.
  - Competition!

# Supervision

---

- Supervision in Teams, lists for booking
  - Week 14 to week 20, one day a week, see Time Edit
  - 08:30 -10:00 Booking in Sign Up (Lisam)
  - 10:15 -11:30 Free supervision (Lisam)

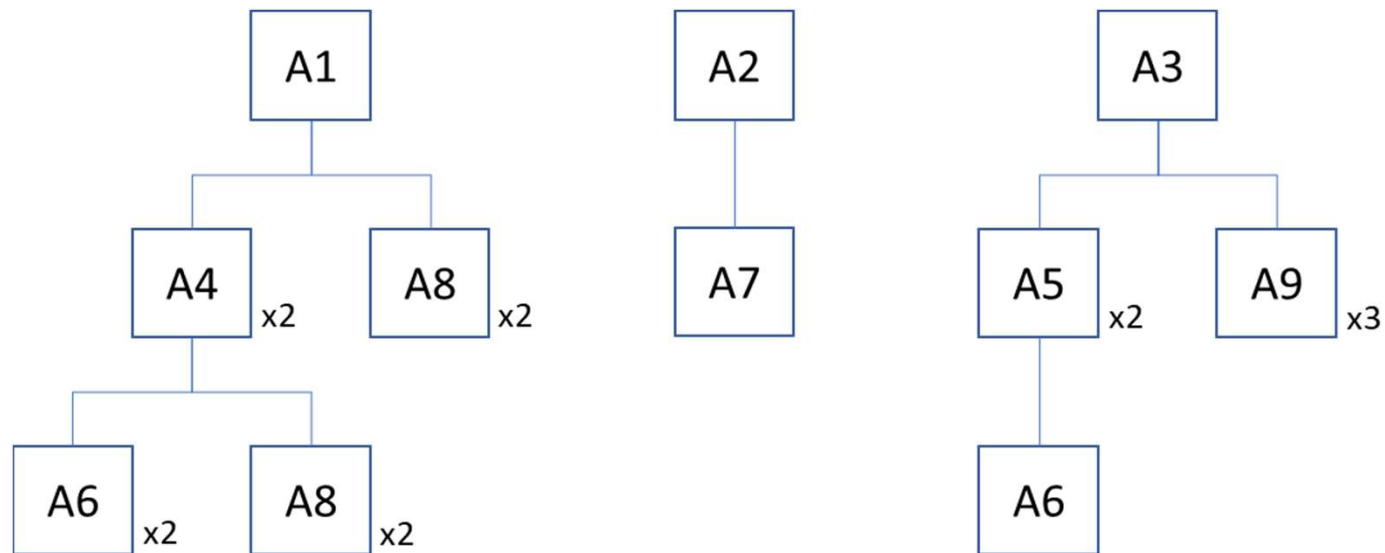

# Project Task

---

- Manufacturing System

- 9 products, 3 end-products, 2 manufactured components and 4 purchased components
- 5 planning groups (resources)
- 5 planning methods, Reorder point, MRP, Cyclic planning, Cyclic planning with base period, and Lean Production

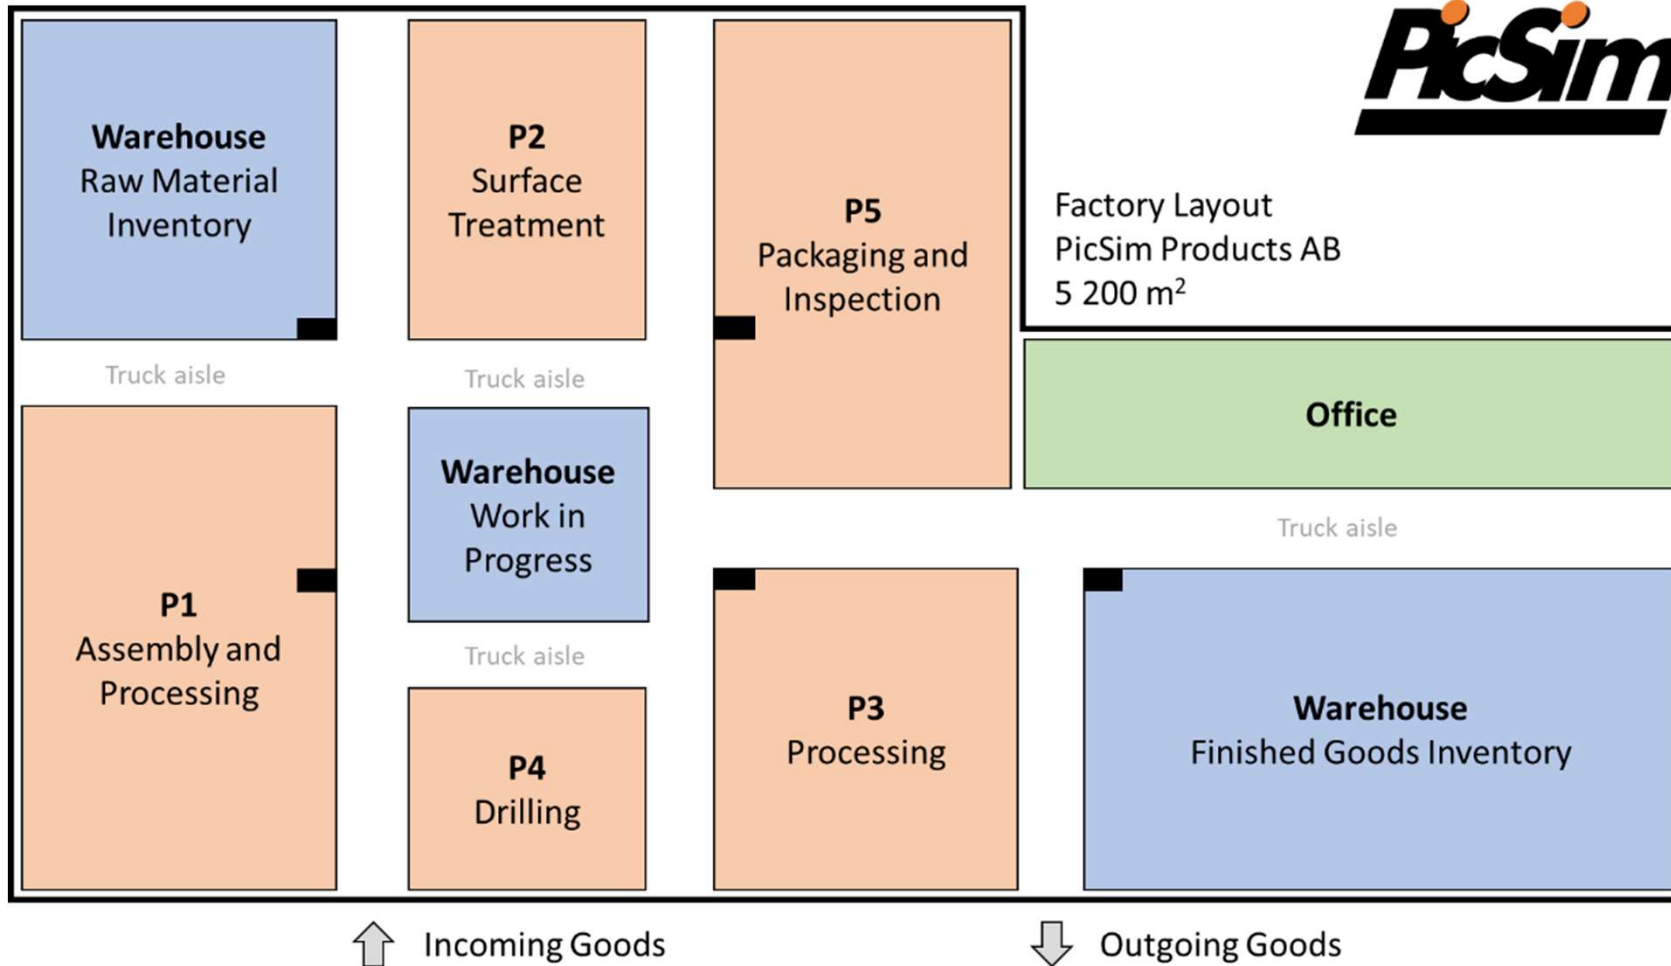

# Project Task

---

- Manufacturing System
  - 9 products, 3 end-products, 2 manufactured components and 4 purchased components
  - 5 planning groups (resources)
  - 5 planning methods, Reorder point, MRP, Cyclic planning, Cyclic planning with base period, and Lean Production

# Batched Production

---

**Processing**

# Batched Production

---

# Batched Production

---

$Q = 10$

What happens to all other 9 parts when 1 part is being machined?

# Task A

---

- Task A
  - For task A, we test the pre-understanding by creating nine different conceptual shapes of graphs
  - The following nine graphs should be drawn:
    - Planned Lead Time's effect (x-axis) on Service Level (y-axis).
    - Planned Lead Time's effect (x-axis) on Inventory Level (y-axis).
    - Planned Lead Time's effect (x-axis) on Ordering Cost (y-axis).
    - Order Quantity's effect (x-axis) on Service Level (y-axis).
    - Order Quantity's effect (x-axis) on Inventory Level (y-axis).
    - Order Quantity's effect (x-axis) on Ordering Cost (y-axis).
    - Safety Stock's effect (x-axis) on Service Level (y-axis).
    - Safety Stock's effect (x-axis) on Inventory Level (y-axis).
    - Safety Stock's effect (x-axis) on Ordering Cost (y-axis).
  - The reasoning behind the shape of each graph should be clearly stated. Note that the graphs are only conceptual, there is no need to grade the axis more than from low to high.
  - To test the conceptual shape of each graph, there is a Lisam Quiz open where the correctness of the conceptual shape can be tested.
  - Passing the Quiz does not mean that Task A is passed but increases the probability to pass the submission.

# Examination – Grading Criteria

---

- Grade Pass requires the following:
  - For Task A:
    - For each of the nine graphs, you need to draw the curve and motivate and explain the shape of the curve.

# System Relationships

---

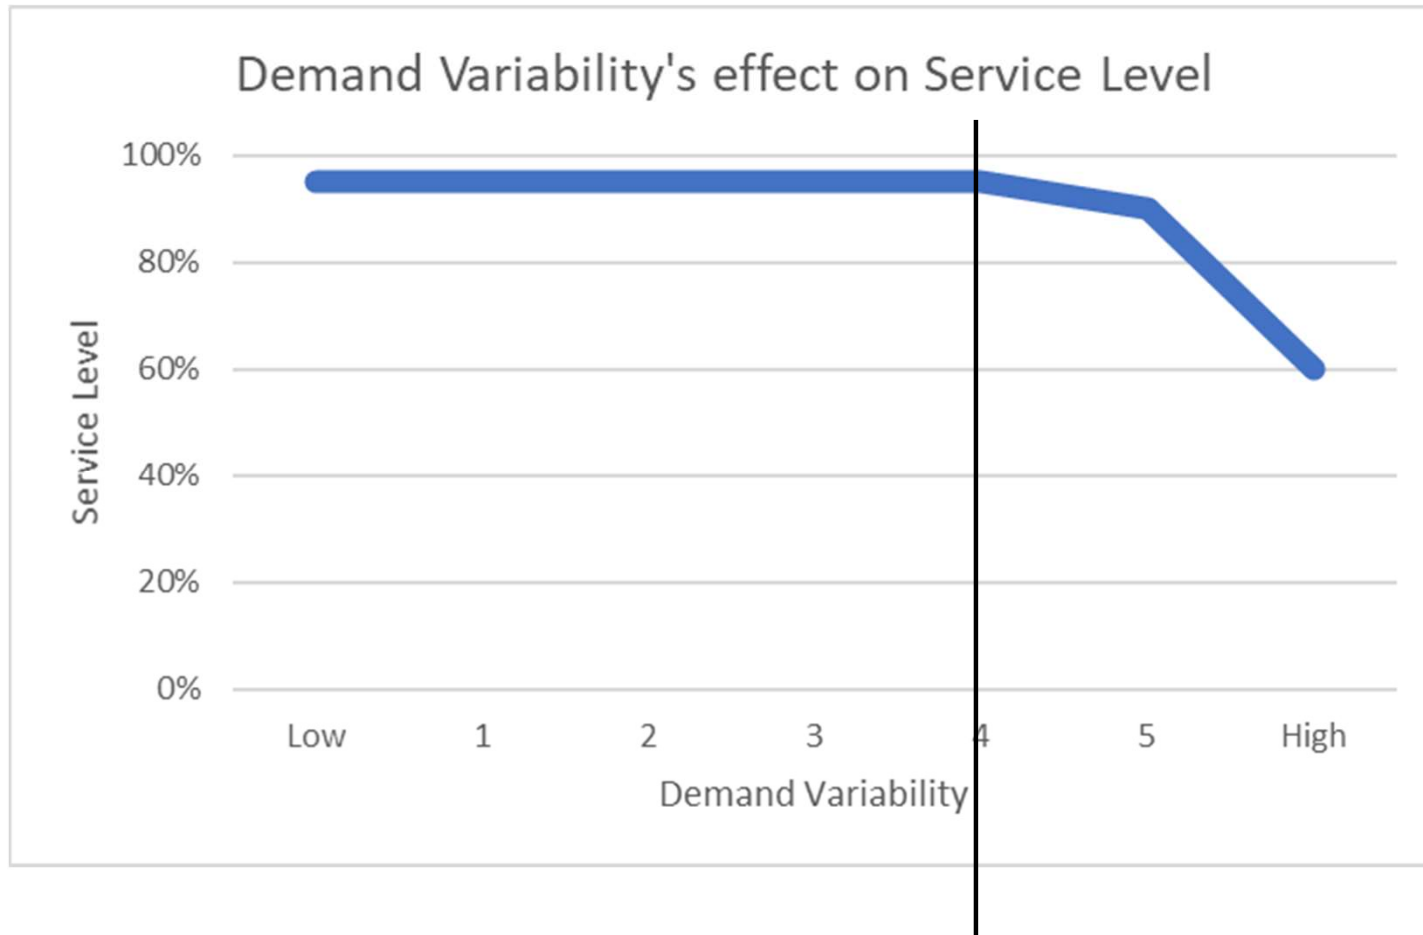

## The Impact of Demand Variability

- Service Level
- Inventory Level
- Ordering Cost

# System Relationships

## Demand Variability's effect on Service Level

# System Relationships

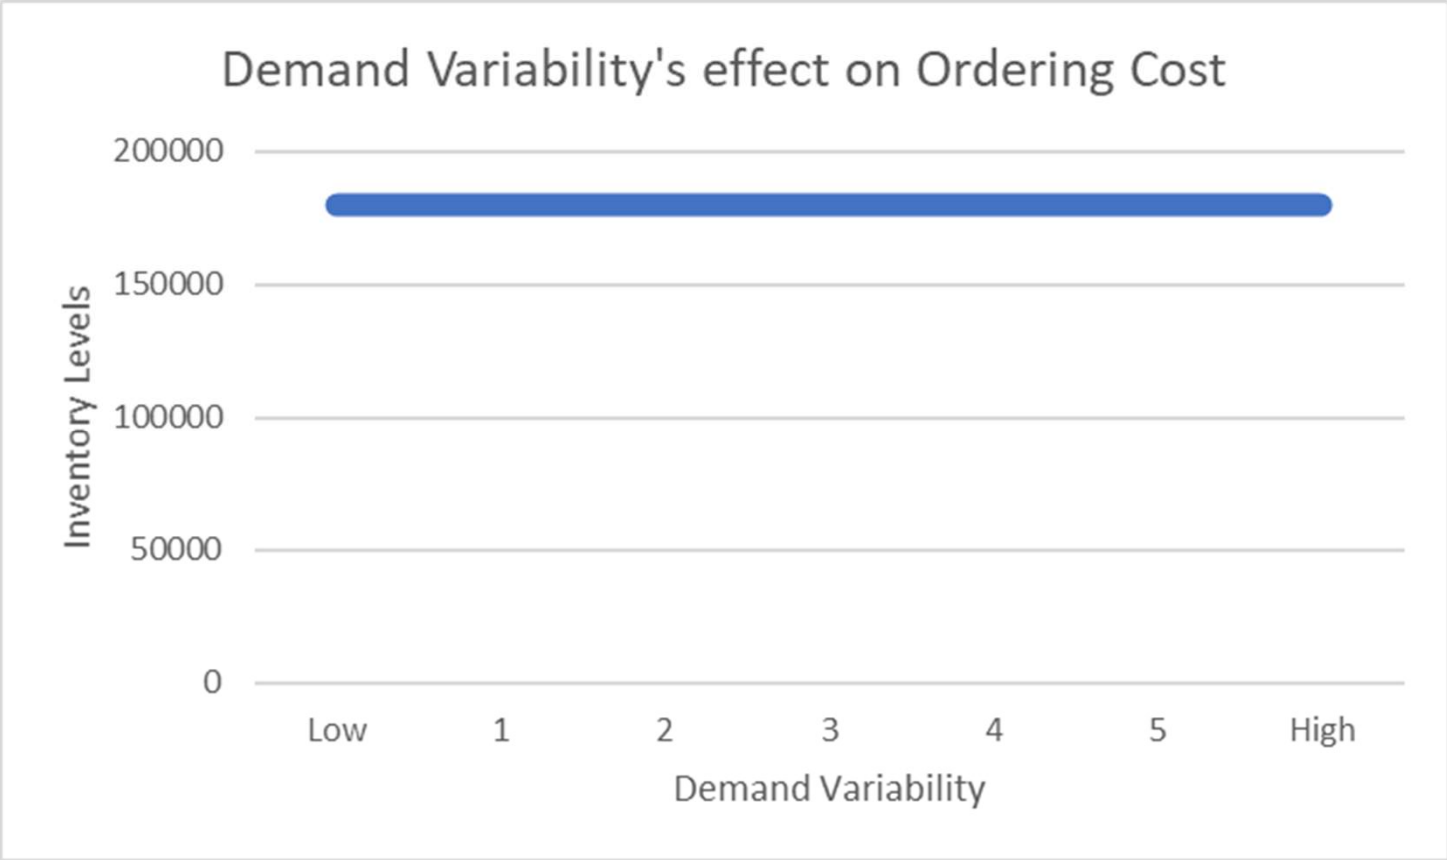

## Demand Variability's effect on Inventory Level

# System Relationships

## Demand Variability's effect on Ordering Cost

# Nine different relationships

---

## Planned Lead Time

- Planned Lead Time's effect (x-axis) on Service Level (y-axis).
- Planned Lead Time's effect (x-axis) on Inventory Level (y-axis)
- Planned Lead Time's effect (x-axis) on Ordering Cost (y-axis)

## Order Quantity

- Order Quantity's effect (x-axis) on Service Level (y-axis).
- Order Quantity's effect (x-axis) on Inventory Level (y-axis)
- Order Quantity's effect (x-axis) on Ordering Cost (y-axis)

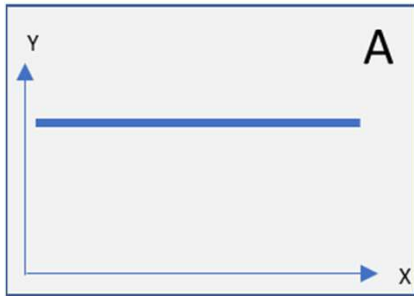

## Safety Stock

- Safety Stock's effect (x-axis) on Service Level (y-axis).
- Safety Stock's effect (x-axis) on Inventory Level (y-axis)
- Safety Stock's effect (x-axis) on Ordering Cost (y-axis)

# The Quiz

---

- Pick the closest conceptual graph

# Instructions

---

- Think about long term effects
  - It is not the transition we are after, but the long term effect of a change
- If unclear, define
  - Inventory level? Which inventory – RMI, WIP, or FGI? Or all of them?
- One correct shape or several?
  - Are there any circumstances where several shapes are possible?
- Think about the motivation already now
  - You do not need to submit the motivation for each graph until the final submission, but it is a good idea to have the understanding ready

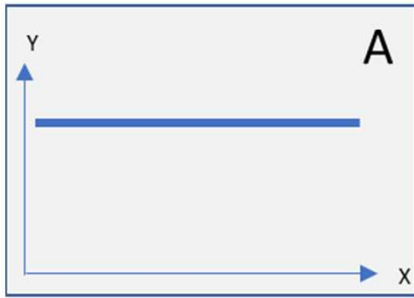

# Usage of the Relationships

Goal: Increased Service Level

# Usage of the Relationships

Planned Lead Time's effect (x-axis) on Service Level (y-axis).

Increase Planned Lead Time!
